

Tennis Ball Condition Test Report

Automated vision analysis

Test Information

Video file	Test video.mp4
Test date	21 July 2026
Ball type	Tennis (reference 67 mm)
Status	Completed

Results

Baseline diameter (at rest)	66.0 mm
Diameter vs specification	65.0 mm (-2.9%)
Maximum compression under load	55.9 %
Ball tracking success rate	92 %

Summary

The ball was analysed under load using computer vision.

Compression % measures deformation relative to the ball's own resting size and is the primary indicator of ball condition.

This test recorded up to 55.9% compression under load.

Resting diameter matched the 67 mm specification within 2.9%.
